Zust Scan

One scan. A better review. Made personal.

Universal Customer Experience Demo

An AI-assisted QR journey helps customers shape their real experience into words they can review, edit, and share. Keep one clear path for customers, then tailor the brand, choices, and questions to the business using it. Install the QR exactly where the moment happens.

The Customer Journey

From a scan to a review they own. A clear sequence that works at a restaurant table, inside a parcel, at checkout, or after a service.

1. **Place the QR**
   Add it to a menu, table card, parcel, receipt, or physical display where the customer naturally interacts with the brand.

2. **Scan & Choose**
   The customer scans the code and picks the product, service, or specific visit type that fits their experience.

3. **Set Their Preferences**
   They choose how the experience felt, award their initial star rating, and select their preferred language.

4. **Get an Editable Draft**
   AI organizes their own selected details and notes into a coherent review draft that they can check, rewrite, or expand upon.

5. **Open the Google Form**
   Tapping "Copy & Continue" seamlessly opens the business's actual review form with the drafted text ready to paste.

6. **Check & Post**
   The customer verifies the stars and text in the native platform, adds any desired photos, and physically taps Post themselves.

> **AI helps with the wording. The customer owns the review.**
> Their story. Their stars. Their final tap on Post. The system never submits automatically.

The Exact Handoff

After the customer selects the product, experience, stars, and language, here is exactly how their review transitions from the guided draft to the final Google Review portal.

AI Writing, Customer Voice

A draft should start with real details. The AI assistant can organize a few simple notes (e.g., "Ordering was simple", "Quick answer") into clearer wording. The rating remains the customer's choice, ensuring authenticity and compliance with anti-gating policies.

Configured By Business

Ready for any niche that uses QR. Tailor the on-screen choices to the service, product, and moment. The customer retains control of their review, while the brand controls the presentation environment.

The Customer Decides	The Brand Configures
01. Experience (Their own details)	**01. Identity** (Logo, colours, tone)
02. Rating (Their own stars)	**02. Questions** (Product, service, visit)
03. Wording (Their edits & language)	**03. Options** (Audience preferences)
04. Posting (Their final tap)	**04. Destination** (Business review page link)

A Simple Rollout

01

Place

Choose a natural QR interaction moment.

02

Configure

Add your brand details and prompt choices.

03

Pilot

Walk through the real flow at one location.

04

Expand

Scale to more stores, products, or languages.

Bring Your Brand

Put a QR where the moment happens. Help customers share their experience in your brand's voice. A universal concept configured for customer-facing businesses in any niche.
